

I would like to urge you to reject the NAB's petition 04-160 that seeks to limit the ability of my satellite radio provider to provide locally pertinent content related to traffic and weather. I travel a great deal and have found this service invaluable in avoiding traffic delays and preparing for bad weather. This is especially true in outlying areas where many local broadcast stations have poor quality signals and service. Thank you for your consideration in allowing the public to choose their source of information rather than having it dictated to them.
